Plaintiff Pro Se, Marilyn R. Pickaree, "Original Petition" and Related
Fact(s) as to pending Litigation to have Pharmaceutical Entity, Eli Lilly
Pharmaceutical Company accountable to all individuals who had "Withdrawal
Symptoms and/or Side Effects" from the medication Cymbalta after usage of
a period span of 3 days to 2 weeks or more.

A. INTRODUCTION

Within the context of the law(s) governing the use of Eli Lilly Pharmaceutical
Company, medication known as "Cymbalta" that was widely prescribed for
individuals medical diagnosis(es) and conditions since the anti-depressant

(6)

medication entered the market in 2004. Since the emergence of Cymbalta the controversy about the drug's labeling on Cymbalta's medication omitted important information about the drug's withdrawal risks in the Company's labeling and marketing materials and consumers were unable to make an informed choice and as to use the medication.

Consumers and healthcare professionals nationwide have not been fully and accurately informed of the frequency, severity and/or duration of Cymbalta Withdrawal since Cymbalta first entered the market in 2004. Eli Lilly through its nationwide marketing strategy led consumers and healthcare professionals to believe that Cymbalta Withdrawal is rare or uncommon. In truth, a significant percentage of Cymbalta Users experience withdrawal.

Eli Lilly misled consumers about Cymbalta Withdrawal according to dozen(s) of Lawsuits filed across the U.S. It is an estimated 44% to 78% of people who stop taking Cymbalta (also known as brand name: Duloxetine) will suffer from withdrawal reactions, yet the warning label for Cymbalta misleadingly suggests the risk is "greater than or equal to 1%". Cymbalta, which is classified as an anti-depressant is used to treat certain conditions and the elimination times and typical onset of withdrawal symptoms after stopping anti-depressants has serious consequences. It has been noted that in a Cymbalta study that shows at least 44% to 51% in withdrawal risk that a 9.6% to 17.2 % are severe.

B. FACTS

The fact(s) involving Cymbalta comes from a long study of consumers with serious consequences involving Cymbalta Withdrawal (please read Plaintiff's "Original Petition, Subsection A.INTRODUCTION) as to the serious side-effects of discontinuation of this medication.

Plaintiff, Marilyn R. Pickaree, was a consumer of Eli Lilly's "Cymbalta" during April 2008 as to her neurologist, Dr. Martin G. Rossi, MD prescribing her Cymbalta to her as to replace her existing medication Neurotin (brand name : Gabapentin) to treat her Perperhal Neuropathy condition and depression diagnosis After taking Cymbalta for a duration of 4-5 days, Ms Pickaree was rushed to the Emergency Room at Memorial Hermann Southwest Hospital in Houston, Texas by EMS paramedic personal as she called the EMS as to her experiencing severe chest pains. Upon arrival @ her apartment the initial vital signs were above-normal. The blood pressure reading was 220/110 and Ms. Pickaree told the EMS paramedic about the switch of medications her neurologist made from Neurotin to Cymbalta, but the Cymbalta caused the abnormal Blood Pressure readings to which the EMS rushed Ms. Pickaree to the hospital.

After the final assessment @ Memorial Hermann Southwest Hospital in April 2008 the ER Doctors told Ms. Pickaree to discontinue the Cymbalta and re-start taking her regular dosage of Neurotin 300 mg.So, Ms. Pickaree started her regular medication, not realizing the serious withdrawal symptoms that would developed after having taken Cymbalta for the 4-5 day duration. (Please read

Plaintiff's Medical Documentation pertaining to Cymbalta Withdrawal Side-Effects in attached Exhibit(s) 10.A , Exhibit 15.B , Exhibit 20.C , Exhibit 25.D , Exhibit 30.E , and Exhibit 35.F). for clarification purposes.

She suffered withdrawal side effects from Cymbalta for the entire period of April 2008 with her repeated Emergency Room Admission for detoxification in Ben Taub's Emergency Room as to not being provided a hospital bed in a private room as to her circumstances of withdrawing off Cymbalta. She was admitted into the Emergency Room on 5 separate dates to Ben Taub and still suffered the withdrawal from Cymbalta for the duration of April 2008 to which she was a juror in Family Law Court on a Child Custody Case. (Please refer to Plaintiff's Medical Document(s) In Relation to Cymbalta Withdrawal Event).

B.1. ATTACHED EXHIBIT(S) FOR PLAINTIFF,
MARILYN R. PICKAREE, FOR CLERRIFICATION PURPOSES

This is a compiled list of Marilyn R. Pickaree, Attached Exhibit(s) for elaboration and clarification purposes for Case Styled; Marilyn R. Pickaree vs. Eli Lilly Pharmaceutal Company World Headquarters Lilly Corporate Center, et al. Please refer to Plaintiff's Exhibit(s) for these purposes herein.

- 10) Exhibit 55.J. Informative Circular from Baum Hedlund Lawfirm as to "Cymbalta Withdrawal Litigation" In Re: Saaverdra v. Eli Lilly and Company. Case No 2:12-cv-09366 (C.D. Ca. 2012) Case filed on October 31,2013 and Amended on January 1,2013 is a Class-Action Case bought on behalf of Cymbalta Consumers in California, New York, Massachusetts and Missouri.

11. Exhibit 60.K. Plaintiff Pro Se, Marilyn R. Pickaree, "Prescription For Original Medication "NEUROTIN" to be taken after "CYMBALTA" was discontinued Prescription Dated April 16,2008 from Dr G. Martin Rossi, MD, Neurologist and Prescription from Ben Taub Hospital (Harris County Hospital District) for "NEUROTIN". Prescription dated April 18, 2008.

C. PLAINTIFF PRO SE, MARILYN R. PICKAREE
CIRCUMSTANCES INVOLVING CYMBALTA.

Plaintiff Pro Se, Marilyn R. Pickaree, was diagnosed by her private neurologist, Dr. Martin G. Rossi, MD in 2003 with peripheral neuropathy and was prescribed Gabapentin (brand name Neurotin) for pain management of her chronic condition. The initial dosage was 100 mg but by April 2008 her neurologist, Dr Rossi had the Gabapentin dosage increased to 300 mg. It was at this time April 2008 that Marilyn R. Pickaree's medication was changed from Gabapentin 300 mg instead to Cymbalta 30 mg by her neurologist as to have the new medicine to be more effective as stated by her neurologist on Ms. Pickaree's Peripheral Neuropathy and depression symptoms.

Marilyn R. Pickaree was given a 7 day initial dosage of Cymbalta 30 mg in a packet that contained 7 pills and then she was prescribed a 30 day supply of Cymbalta by her neurologist, Dr. Rossi. During this time, Ms. Pickaree was a juror in Family Court on a Child Custody case @ The Harris County Family Law Center. She started the initial dosage of Cymbalta for the first 4 days of use and on the fifth day, after having taken the fifth pill she had severe chest pain/ discomfort to which she was at her primary residence and subsequently called for EMS personal to come to her residence. Upon arrival at Ms. Pickaree's Residence the paramedic assessed Ms. Pickaree's vital signs and chest pain/ discomfort at the scene.

The paramedics recorded a blood pressure of 220/110 and basically rushed

Ms. Pickaree to the nearest hospital which was Memorial Hermann Southwest Hospital; located @ Hwy 59 and Beechnut St. in Houston, Texas. Upon arrival at the hospital; Emergency Room Ms. Pickaree was assessed further with her chest pain discomfort and provide the Emergency Room personal that her neurologist, Dr. Rossi switched her from gabapentin to Cymbalta and that is when the ER Doctor informed Ms. Pickaree as to discontinue Cymbalta and to start her Gabapentin therapy (300 mg) again and to inform her neurologist of the negative side-effect(s) of Cymbalta in relation for the treatment of the peripheral neuropathy.

The only question that Ms. Pickaree was concerned about was the time frame of when Cymbalta would leave her system to which the Emergency Room Doctor replied 36 to 48 hours and the medication is excreted out the system through the kidneys/urine. So basically she was discharged from the hospital within 6-8 hours of arrival and went back to her residence.

It was afterwards a period of 24 hours lapsed after the last Cymbalta medication was discontinued the the negative withdrawal side effects happened with Ms. Pickaree, she took the medication from April 12, 2008 to April 16, 2008 (Please read Exhibit 40.G. Plaintiff, Marilyn R. Pickaree "MedWatch Federal Drug Administration Safety Information and Adverse Event Reporting Program") Also read Exhibit 35.F. Plaintiff, Marilyn R. Pickaree, "List of Withdrawal / Side Effects Symptoms from Cymbalta Medication Usage" for the Month of April 2008). She admitted herself into the Harris County Hospital District, Ben Taub Hospital as to endure the physical withdrawal from Cymbalta inside of the

Hospital's Waiting area during her admission on a daily basis from April 16,2008 to April 20,2008 as to the Hospital staffing was not able to provide a room with bed for Ms. Pickaree to be medially monitored during this time.

The negative experience of Ms. Pickaree, ordeal with Cymbalta Withdrawal Side-Effects was unexpected and most importantly not to be notify of the serious adverse side-effect(s) not mentioned to her as to the discontunation of Cymbalta was not fully discussed . The withdrawal symptoms continued for the rest of the month of April 2008 and it took a 1 week in hospital stay for Ms. Pickaree. (Please refer to Plaintiff's Exhibit 10.A , 15.B , 20.C , 25.D, 30.E and also refer to Exhibit 35.F. "Plaintiff, Marilyn R. Pickaree "List of Withdrawal/ Side Effects Symptoms from Cymbalta Medication Usage" for the month of April 2008).

The end result for Ms. Pickaree's negative experience involving Cymbalta in her opinion "one of the worstest anti-depressant " and I will never take another antidepressant ever. The simple fact of the matter is that the consumer(s) who have used Cymbalta for as little as 3 days to 2 weeks can expect to suffer from "Cymbalta Withdrawal" symptoms that can last for the entire month or so, as was the circumstamces involving Marilyn R. Pickaree. She never had in thought that she would suffer from the "withdrawal effects" of Cymbalta after having taken the medication for only 1 week. The hospital nurse at Ben Taub hospital along with the staff did little or nothing or provide relief for "Ms. Pickaree's withdrawal symptoms" but rather just medical observation as to her health in general. Even after the 1 week stay @ Ben Taub, Ms. Pickaree still suffered re-lapses in relation

to the discontinuation of Cymbalta the entire month of April 2008 after she through the worse was over with the side-effect(s). Cymbalta has long reaching effects that has lasted for several weeks to months with consumers and most consumers are compelled to continue Cymbalta simply because they cannot quit the medication as to the “withdrawal effect” of the drug..

Even despite the fact that the issue involving Ms. Pickaree’s Case happened in April 2008 it stills haunts her to this day and after having the “Cymbalta Withdrawal” issues she maintains that she will not ever take another anti-depressant as Cymbalta was the 3rd antidepressant prescribed to Ms. Pickaree to treat her peripheral neuropathy and depression. She lives with both conditions as of now.

The maker of Cymbalta, Eli Lilly Pharmaceutal Has the obligation and moral standing as to settle all claims involving “Cymbalta Withdrawal” including most importantly, Ms. Pickaree’s claim/case involving the practices and misrepresentation of Cymbalta’s withdrawal side-effects. The maker, Eli Lilly and it’s partners are aware of the serious withdrawal issues surrounding Cymbalta and they should be honest as to inform consumers of the conqunses of stopping anti-depressant s, like Cymbalta, period.

Ms. Pickaree, had no other choice but to stop Cymbalta based on the Emergency Room Doctor’s recommendation and it caused her substaintial harm to her mind, body and mental wellbeing to which she seeks monetary compensation for the “Cymbalta Withdrawal Event(s)” that happened during the course of April 2008.

D. PLAINTIFF, MARILYN R. PICKAREE, "STATUTE OF
LIMITATIONS" IN CASE STYLED "PICKAREE VS. ELI
LILLY PHARMACEUTAL COMPANY, INC.,"

By law, within the United States Federal District Court guidelines, In
Re: Saavedra vs. Eli Lilly and Company; Case No. 2:12-cv-09366 (C.D.Ca 2012)
This case was filed on and amended on January 1,2013 to which Plaintiff,
Marilyn R. Pickaree is to file her class-Action Case In Re: Marilyn R. Pickaree
vs. Eli Lilly Pharmaceutal company within the Bob Casey Federal Courthouse of
Houston, Harris County, Texas no later than January 1,2015 to which Plaintiff
will have her case to be filed within the 2 year "Statute Of Limitations" guidelines
if for any reason Defendant, Eli Lilly Pharmaceutal Company fails to satisfy
Plaintiff's Demands for her "Cause of Action" this case will be filed in the Bob
Casey Federal District Courthouse accordingly, by law.

E. RELIEF SOUGHT IN CASE "PICKAREE VS.
ELI LILLY PHARMACEUTAL COMPANY".

Please refer to Plaintiff, Marilyn R. Pickaree, "Individual Settlement
Agreement, Release and Indemnity" for Plaintiff, Marilyn R. Pickaree for
elaboration. In all Plaintiff seeks from Eli Lilly Pharmaceutal Company all just
so compensation for her injuries as a direct result of her use of the medication
"Cymbalta" which is the subject of this litigation, herein.

F. PRAYER FOR RELIEF

Plaintiff, Marilyn R. Pickaree, prays for a final resolution of her negative ordeal with her circumstances with Eli Lilly Pharmaceutical Company for all such and just relief that Plaintiff, Marilyn R. Pickaree is entitled to and that Defendant, Eli Lilly takes nothing in regards to this litigation.

Respectfully Submitted,

of Withdrawal / Side Effects Symptoms from Cymbalta Medication Usage"
for the Month of April 2008.

Exhibit 35. Fi.

PLAINTIFF PRO SE, MARILYN R. PICKAREE, "WITHDRAWAL
SYMPTOMS FROM CYMBALTA MEDICATION , DURING APRIL 2008.

Here is a list of the serious side-effects that I, Marilyn R. Pickaree, experience from the medication Cymbalta during the time period of April 2008. Some of the reactions continued well beyond the 1 month after April 2008.

- * Irritability
- * Severe Stomach Pain(s)
- * Severe Lost of Appetite
- * Severe Weight Loss (20 lbs to 25 lbs in one week)
- * Severe Paranoia Episodes throughout the day.
- * Severe Delusional Thoughts at Night (I had a fear of being alone at night in my home. I lived alone by myself during the "Cymbalta Withdrawal Events" and this is the reason I admitted myself into the Ben Taub Hospital as to be in a safe setting).
- * Insomnia (Severe)
- *Withdrawal Mini-Seizures
- * Severe Headaches
- * Drastic Rise and Fall of Blood Pressure. The Highest B/P was 220/96 and the Lowest B/P being 68/30.
- * Chills
- * Nausea
- * Nervousness
- * Leg Weakness
- * Severe Restlessness/ Agitation
